

Camera trap recording and reporting including AI

Projects using motion-triggered cameras ('camera traps') can use the Trap.NZ's camera trap functions to load and tag images, optionally using image recognition software (AI, artificial intelligence) for assist in detecting species.

In order to load and tag images, you will need to create a [monitoring station](#) with a type "Camera" for each of your camera traps. A Camera station will have a button to allow the uploading of images.

The new AI identification option allows members to upload and tag captured images to your trap.nz project easily.

1. Select the camera on your trap.nz project you are wanting to add images to.
2. Open the installation and select **upload images**

View Edit

trap.nz

Line: track
Monitoring type: Camera
Date installed: Tuesday, August 2, 2022
Lat: -40.835828380882
Lon: 175.219802648070

Upload Images

3. You will be prompted to drag and drop your files into the trap.nz page

4. Your images will display ready for uploading. If the date/time shown is incorrect you can alter these settings here

Note: the programme will detect any duplicate images ensuring you don't accidentally load them twice

5. The images have all loaded successfully when the 100% appears in the bottom left corner

6. You can now choose to match with the AI and select return, be patient as this can take some time depending on the quantity being processed

Match with AI  Return 

Your images are being processed by our AI!

Feel welcome to close this page, your image records on Trap.nz will be updated automatically when the results are in!
This process may take a long time

6. If you choose to match it with the Artificial intelligence software, the chip icon appears when it has matched.

You can exit the page while it is being processed without fear of losing your records or having to start again.

7. You will be redirected to the camera installation page, the records are displayed under the map, and you can now tag/ review species in the image set.

Please note: the Camera AI has been updated to identify a larger number of species. These now include:

- Bird
- Cat
- Deer
- Dog
- Ferret
- Goat
- Hedgehog
- Kiwi
- Lagomorph (rabbits and hares)
- Livestock
- Pig
- Possum
- Rodent (rats and mice)

Stoat
Wallaby

To add the new species to the monitoring of your trap.nz project go to the [project categories](#)
