

Check your sensors

Sensors

When a sensor is triggered the Trap.nz notification system will send an email and message to the Trap.nz app. Do not rely on the notifications, trappers must still check the status of all sensor traps via the app or website.

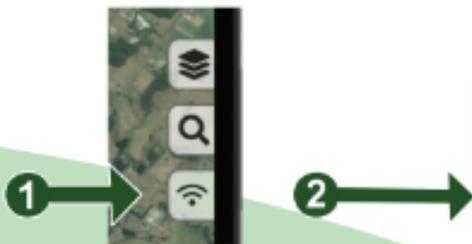

This ensures that sensors that aren't responding are detected and covers the scenario when the notifications fail.

A) Turn on Notifications in both the My Account page, and against each trap

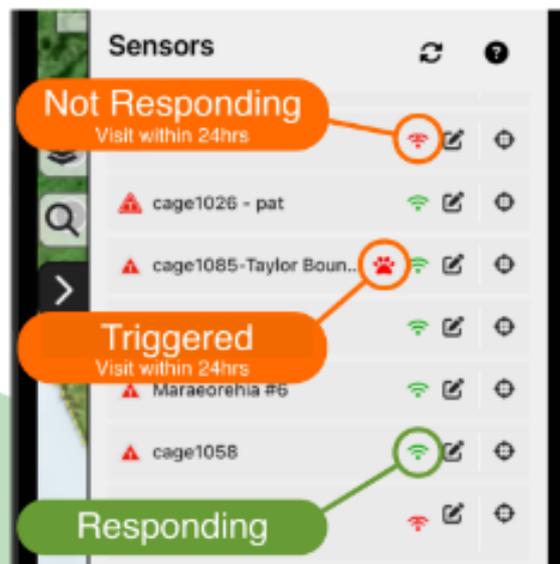

Send me email alerts for sensor traps I'm subscribed to

Alert me of sensor events!

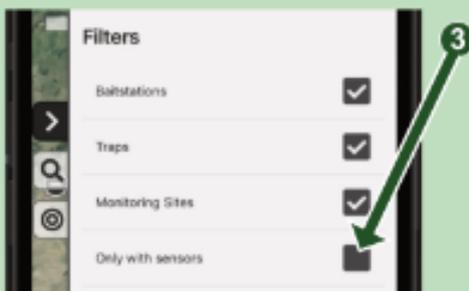

b) Check statuses

⚠ Site visit required
Within 24 hours for live capture by law

c) Optional filters

To only view sensor traps on the map use the 'Only with sensors' filter.

4 Log it !

All records are important, species, bait type, false triggers, etc.
