

Using a QR codes

QR codes allow you to enter trap records quickly via the phone camera.

Note: NFC / QR is **only enabled for traps**. If you would like this feature enabled for all installation types, [please vote here](#).

Which phones are compatible with QR?

Technically, all phone cameras are compatible with QR codes. However, some older phones may require an app for you to scan them. If your camera does not recognise a QR code, install a free QR reader from your app store.

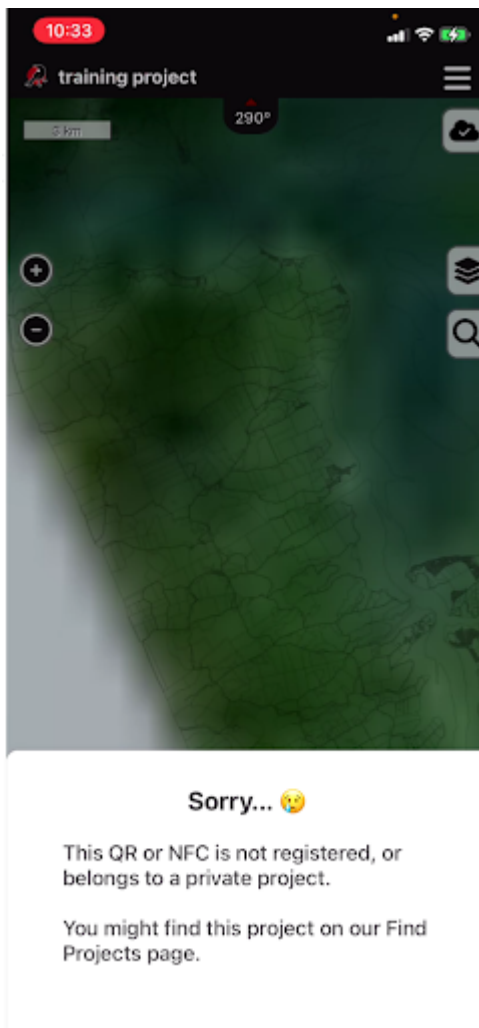

The trap will have a QR code fixed to it.

Open your camera and point it at the QR code.

This will give you a trap.nz tab (see bottom of the screen). Tap this tab
