

Why can't I import data? it says I'm not using the correct file encoding.

If your CSV file is not being accepted and it says "Source file is not in UTF-8 encoding", you may need to download it using another file code. In the case below ANSI needed to be substituted with Windows 1254 in the import page.

start_date (required): The date and time of the record. Dates must be in ISO 8601 format, e.g:

2022-08-09 08:53

end_date (optional): The end date of the record, if left out, will be set to the same value as the start date.

line (optional): The line the parent Station is attached to. Only needed if you have stations with the same name on different lines.

species (required):

protocol (optional):

disturbed (optional):

Yes, No

recorded by (optional): Person who recorded this record.

notes (optional):

Note: If the Import button is disabled and a progress % is displayed please refresh this page after a few minutes and try again. If the Import button remains disabled, please [contact us](#).

import

Import **CSV** files with one or more of these columns: station, start_date, end_date, line, species, bait, survey, protocol, disturbed, recorded_by, notes.

- No columns are unique. The import will only create new items, no items will be updated.
