Why can't new members see installations?

When a new member is added to a project without any permissions, they have limited access.

As a basic trapper they can:

- Add new installations
- Be assigned to existing installations
- Add and update the records for only those installations

A Project Administrator can update the new member's role to <u>Advanced trapper</u> to allow view only access to all installations via the website, or <u>Manager</u> complete access via the web and the app. If security and privacy is a concern, it is better to specifically assign installations to the trapper.

Read more about what the different roles mean and how to change members roles.
